An abstract graphic on the left side of the slide features several large, thick yellow circles connected by thick yellow lines, forming a network-like structure. The background is a solid teal color.

Observability with elastic

The innovation enablers

Agenda

- Introduction
- Observability using elastic – why?
- Elastic ecosystem
- Application performance monitoring

01

Introduction

Marek Hornák

Tech lead / data engineer @ ableneo

02

Observability using elastic

Why?

Why elastic stack?

- Opensource or free
- Fast and reliable
- Heavily used in world – good support
- Simple to install and operate (excluding perf. tuning :-)
- Whole ecosystem of components which play nicely together
- Most organizations already use elasticsearch

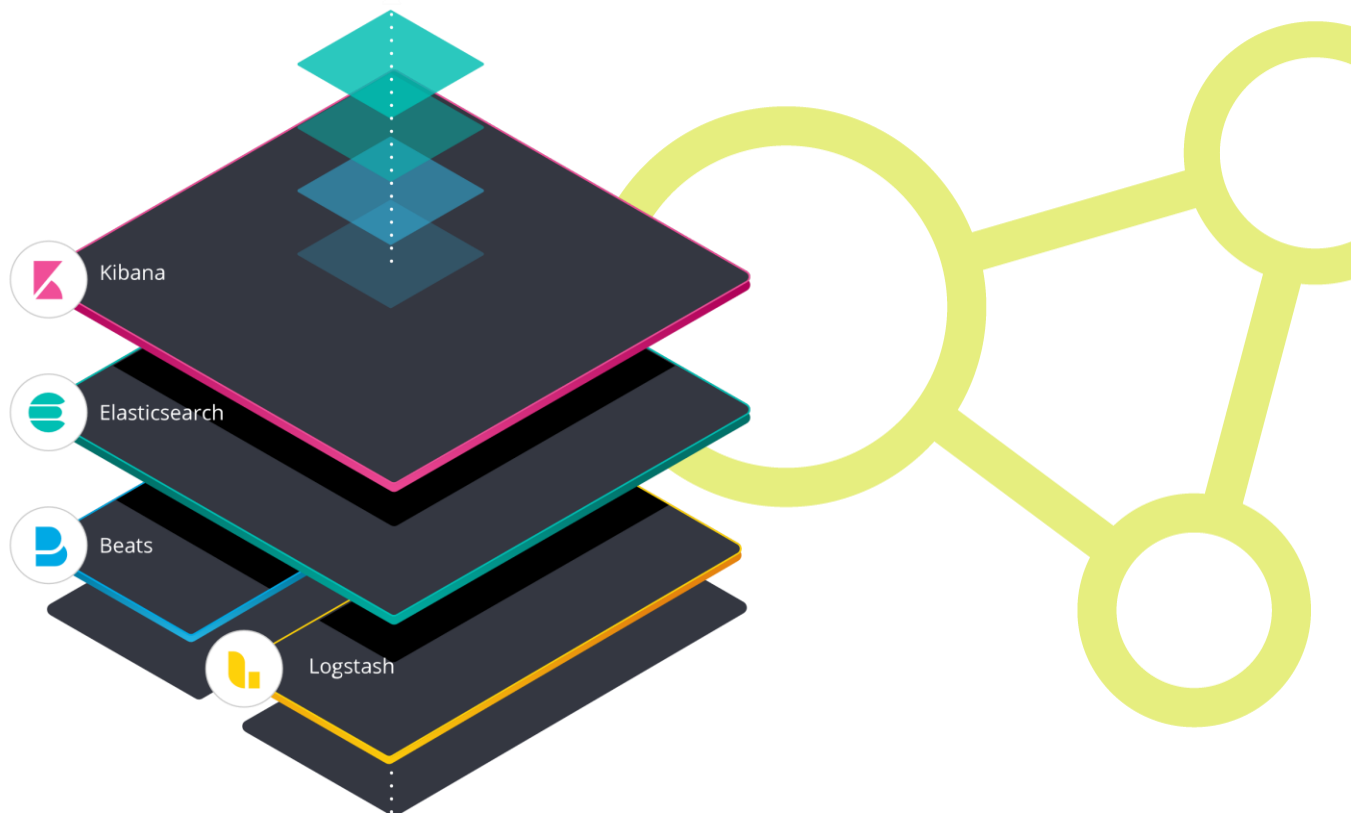

03

Elastic ecosystem

How?

ELK stack

04

Elastic APM

App insights in elastic

Elastic APM

- Monitoring of distributed apps
- Transactions – from first request to last response
- Spans – are part of transaction – single action duration
 - DB query, REST call, code block...
- Kibana APM UI

Elastic APM

Supported technologies:

- Java
- Node.js
- Django
- Rails
- Go
